

IDEA 10

Unlock the power within your data

IDEA 10 Licensing

CaseWare offers several IDEA 10 software licensing models designed to help your business meet its data analytics needs in the most cost-effective and efficient way possible. Our electronic licensing technology is designed for maximum ease of use and flexibility. For more information, or for assistance with choosing the right licensing model for your business, please contact us at 1-800-265-IDEA (4332).

Single - One Computer

Buy only the IDEA licences you need.
Users are not bound to a network.

Single licences are intended for use on one computer only. For usage on additional computers, you must purchase additional Single licences or another type of protection (see below). The Single licensing model is not compatible with IDEA Server, Citrix and Terminal Services environments.

Benefits

- Buy only the licences you need.
- Users are not bound to a network and can work remotely (offsite).
- Software is easy to install as the licence control is installed during the IDEA installation.
- Updates and upgrades available from the CaseWare IDEA Support website with a valid support contract.

Corporate - Named User

Named-user licensing model.
Users are not bound to a network and can "checkout" and "check in" IDEA licences.

Corporate licences are intended to serve multiple users from a network server, as well as allow users to work remotely. With this model, users can "check out" an IDEA licence from the licence server for offsite use. Within 180 days, users must "check in" the licence to the licence server before they check it out again. Users can check in the licence at any time before the 180-day period ends to reset the counter.

IDEA can be installed on as many computers on the network as desired, but can only be run by named users whose names are contained in the appropriate Active Directory group.

There are two layers of security that balance the security and its maintenance:

- The First layer is the Active Directory group named for the users that are part of the Active Directory.
- The Second layer is named users within our central electronic licence manager tool.

Administrators can manage specific named IDEA users within our licence manager tool. In order to enable usages on IDEA application, these named users need to be part of the Active Directory group, as well as our central electronic manager tool. This is a two-step process so that we can provide the flexibility and control that is desired.

Benefits

- One central electronic licence manager controls the IDEA licences across the network.
- Employees can use IDEA onsite connected to the network or offsite by checking out the licence.
- Can be installed on a computer running a server operating system. Supports silent installation.
- Compatible with virtualized environments (IDEA licence required for each virtual machine).
- Updates and upgrades available from the CaseWare IDEA Support website with a valid support contract. Compatible with IDEA Server.

Concurrent

Floating, fixed-number licensing model based on the number of users accessing the program simultaneously.

Licences can be shared by all users that are connected to a network.

Concurrent licences are also intended to serve multiple users from a network server. This licensing model may be a cost-effective way to provide IDEA to employees who use IDEA occasionally. The main difference between the Concurrent model and the Corporate model is that Concurrent users can only use IDEA when connected to the network.

IDEA can be installed on as many computers on the network as desired, but simultaneous usage is limited to the number of purchased licences.

Benefits

- Fixed-number licensing model on a floating number of computers.
- Ideal for companies with many employees who use IDEA occasionally.
- Licences can be shared by all users that are connected to a network.
- One central electronic licence controls the IDEA licences across a network of workstations.
- Can be installed on a computer running a server operating system.
- Compatible with Citrix, Terminal Services and virtual environments.
- Updates and upgrades available from the CaseWare IDEA Support website with a valid support contract.

About CaseWare Analytics

With more than 400,000 users worldwide, CaseWare Analytics technologies are built upon the foundation of best practices in assessing risk and controls, enabling audit and finance professionals to use real data insights to create remarkable ROI and business improvement opportunities.
